

Unicell®

Responsive. Durable.

Simply designed to respond to change. A flexible materials handling, storage and cart system with the minimum number of parts achieving the maximum number of configurations.

The Unicell® modular system of transport and storage products was designed to meet the drive for cost containment and operational efficiency in the healthcare industry. With the growing need for uncompromising standards of patient care and employee well-being, facilities must maximize every investment. Unicell® products have a seamless design, offering superior cleanliness and structural integrity that exceeds the industry standard for performance and durability making it the system of choice.

Unicell®

Created specifically to meet the exacting requirements of today's health care providers.

Integration - components easily facilitate rearrangement according to changes in function, use and location. This flexibility enables you to make changes without disruption or downtime.

Durability - components are high strength structural plastic that withstand abrasion and chemicals, and are virtually rust, chip and dent proof.

Infection Control - one piece solid construction with no gaps, cracks or crevices designed to be easily disassembled and cleaned.

Simplicity

Minimum number of parts to achieve the maximum number of configurations.

Efficiency

A forgiving system of products that are able to adjust quickly to changes.

Human Health

Products designed to be easily cleaned and sanitized improving infection control and safety.

Employee Satisfaction

Easily adjustable products that support ergonomic requirements and provide a healthy environment for staff.

Positive Return on Investment

Reusable products with an unmatched warranty.
